

PLANNED PREVENTATIVE MAINTENANCE (PPM)

A well-maintained building in good repair provides landlords, occupants and staff with a safe and productive work environment while at the same time creating lasting value, possible investor return and at the same time reducing the probability of system failure leading to a more costly repair bill further down the line.

KMS CPM LTD provide Planned Preventative Maintenance (PPM) which is a schedule of planned maintenance operations aimed at the prevention of breakdowns, property damage and system failures. The primary goal of our PPM is to prevent the failure of buildings before it actually occurs, maintaining a "fit for purpose" environment.
